Child survey methodology

A confidential survey of children is carried out by HMI Prisons researchers at each STC on an annual basis. A self-completion questionnaire is offered to every child resident in the establishment on the day of the survey. The questionnaire consists of structured questions covering the child's 'journey' from admission to release together with demographic and background questions which enables comparison of responses from different sub-groups (numbers permitting). There are also a few open questions which provide opportunities for children to express in their own words what they find most positive and negative about the centre.

The current questionnaire has been in use since October 2018 and is being used in surveys of STCs and also YOIs holding children. The questionnaire was developed in consultation with HMI Prisons and Ofsted inspectors. Draft questions were tested with children in both types of establishment and their input and feedback was invaluable in improving the relevance and accessibility of questions.

Distributing and collecting questionnaires

HMI Prisons researchers distributed and collected the questionnaires in person. So that children could give their informed consent to participate the purpose of the survey and how the information provided will be used was explained.

Children were made aware that participation in the survey was voluntary. We also explained that while they did not need to put their name on the questionnaire, individual respondents could be identified via a numbering system which is only accessible to the survey team. This was so that any child protection and safeguarding concerns could be followed up (see section below for further information).

Children who agreed to participate in the survey were provided with a sealable envelope for their completed questionnaire and told when researchers would return to collect it.

Child protection and safeguarding

All completed questionnaires were checked by researchers for potential child protection and safeguarding issues on the day of the survey. Any concerns were followed up by inspectors and passed on to establishment staff if necessary.

Survey responses

At the time of the survey on 8 March 2022 the population at Oakhill STC was 38. Using the approach described above, questionnaires were distributed to 36 children. Questionnaires were not distributed to two children who were at court on the day of the survey.

We received a total of 36 completed questionnaires, a response rate of 100%.

Child survey results and analyses

Over the following pages we present the full survey results followed by numerous comparative analyses for Oakhill STC. For the comparator analyses, where relevant, each question was reformulated using the Chi-square test (or Fisher's exact test if there are fewer than five expected counts in a cell) into a binary 'yes/no' format and affirmative responses compared. Missing responses have been excluded from all analyses and for some questions, responses from a sub-group of the sample are reported (as indicated in the data).

Responses from Oakhill STC March 2022 compared with those from other HMI Prisons surveys

These analyses are carried out on summary data from all survey questions.

- The current survey responses from Oakhill March 2022 compared with the responses of children surveyed at Oakhill in September 2021.

Comparisons between different residential locations within Oakhill STC March 2022

- A comparison within the March 2022 survey between the responses of children on the Platinum units (Ash 1 and 2) compared with those from the rest of the centre.

Comparisons between self-reported sub-populations of children within Oakhill STC March 2022

These analyses are carried out on summary data from selected survey questions only.

- Responses of children in racial minority groups compared with those of white children.
- Responses of children who reported that they had a disability compared to those who did not.
- Responses of children who reported that they had been in local authority care compared with those who did not.

Please note that we only carry out within-prison comparator analysis where there is a minimum of 10 responses in each comparison group.

In the comparator analyses, statistically significant differences are indicated by shading. The probability threshold (i.e. p-value) is set at 0.01 which means that there is a 1% likelihood the statistically significant difference between the two groups is due to chance. Results that are significantly more positive are indicated by green shading and results that are significantly more negative are indicated by blue shading. Orange shading has been used to show a statistically significant difference in demographic or other background details. If there is no shading, any difference between the two results is not statistically

significant and may have occurred by chance. Grey shading indicates that there are no valid comparative data for that question.

Filtered questions are indented and preceded by an explanation in italics of how the filter has been applied. In the comparator analyses, percentages for filtered questions refer to the number of respondents filtered to that question. For all other questions, percentages refer to the total number of valid responses to the question.
